

It is our core philosophy to promote stable and secure investments for our clients. This portfolio enhances returns by exposure to the South African private equity franchise industry. The portfolio promotes: A fixed dividend return, [inflation driven] - improving on tax efficiency | Returns that are fixed net of fees | Investment term of 5 years - lowering transactional fees and improving consistency | Targeted special dividend after 5 years - benefiting long term investors.

Investment Objective

Is to create a long term stable return, in a lucrative, well established industry, by utilising private equity at the core of the portfolio. The objective for 2021 for our asset managers is specifically to further promote private equity in the medical franchise industry. Our benchmark is to generate a return of inflation plus six percent. Should markets, interest rates and inflation fluctuate over the medium to long term, investors can be rest assured that the sector they are invested in, has proven that it is recession and inflation resistant.

Risk Profile

The asset managers carefully select the underlying portfolio of assets, promoting exposure to real growth assets and not fluctuating listed equity - quality management, safeguarding and retention of assets as well as a portfolio that, as its principle, is to increase turnover and investor dividend returns.

* Investor receives a 100% allocation towards their investment. NO FEES ARE DEDUCTED BY EVEREST FROM THE INVESTOR'S ACCOUNT. The above fees form part of a special fee arrangement in which fees are recovered from the surplus profits of the underlying private equity portfolio.

- * Private equity typically refers to investment funds organized as limited liability partnerships that are not publicly traded and whose investors are typically large institutional investors or informed individuals.
- * The portfolio is only suitable for long term investment horizons
- * Private Equity has a demonstrated higher investment return, for long term investors

Sector Focus

Franchising has proven to be resilient when faced with economic strife and at franchising's premise is the ability to enter into an already tried, tested and profitable model.

With a new drive towards the medical franchise industry specifically, it is the asset manager's aim to also eliminate the "Black Swan" risk, of these unexpected Covid-19 type of events, by shifting new investment into the "essential services" franchise sectors that have and will continue to be operational during events that critically test both local and global economies.

Is this solution for me?

- 1) Do I seek a consistent income yield, over the medium to long term, in a focused alternative asset portfolio
- 2) Am I ideally investing for at least 5 years
- 3) Am I comfortable with not having immediate access to funds
